PROFILE

Engineering student with strong interest in backend systems, automation, and embedded technologies. Experienced in Python development, Linux server deployment, API integrations, and bot development. Creator of the Alogin authentication library published on PyPI with 1000+ downloads.

EDUCATION

B.E. – Information Science and Engineering

09/2025 – 09/2029

Sai Vidya Institute of Technology (SVIT), Bengaluru

SKILLS

Programming Python, C, C++, SQL, HTML, CSS, TypeScript

Hardware Raspberry Pi, Arduino, FPGA, MicroPython, LiDAR, Ultrasonic Sensors

Technologies Linux, REST APIs, Firebase, Server Deployment, Web Development, Bot Development

PROJECTS

Alogin – Python Authentication Library

02/2026 – Present

Python auth library on PyPI (v0.2.1) with 1000+ downloads. Simplifies authentication for developers and applications.

Gojo – Linux Server Monitoring Bot

01/2026 – Present

Discord bot for remote Linux server monitoring – displays CPU/RAM usage and allows admin management via Discord.

DeepSeekSocial – Social Detox Platform

08/2025 – Present

1st place ISE Hackathon. Browser extension tracking screen time with Firebase backend and live analytics dashboard. Stack: HTML, CSS, JS, Firebase.

Machine Learning Company Scale Prediction

06/2025 – Present

Python ML models predicting company growth scale with 65–70% accuracy; includes full data preprocessing pipeline.

Smart BMTC Bus Tracking System

09/2025 – 02/2026

GPS-free public transport tracker using RFID tags on buses + NFC-based digital ticketing for passengers.

Autonomous Sensor-Based Smart Car

10/2024 – 02/2025

Driverless prototype using LiDAR and ultrasonic sensors for obstacle detection and navigation – no camera required.

AWARDS

ISE Department Hackathon – 1st Place, SVIT Bengaluru

11/2025

Won for DeepSeekSocial – browser extension for social media usage analysis and digital addiction reduction.

Innovation Grant – Autonomous Sensor-Based Car, College Management

10/2025

Received Rs.12,000 institutional funding to develop a LiDAR/ultrasonic sensor-based autonomous car prototype.

COURSES & LANGUAGES

Courses Cybersecurity – TryHackMe (Linux security, networking, penetration testing) (in progress)

Languages English (Professional) Hindi (Working) Kannada (Native)
